Terry Lamphier Comment - RE Diablo Canyon license extension

RE: Diablo Canyon license extension

The climate crisis may necessitate the extension of operations of the hundreds of aging nuclear plants in the US and around the world but before doing so, each plant for consideration should have an independent, thorough and robust safety inspection, especially in the case of Diablo Canyon.

Any serious accident at this plant sited next to two earthquake faults has the potential of poisoning our nation's central valley breadbasket or making surrounding cities "habitat exclusion zones" for hundreds of years - all to gain 5-10 years of "clean energy".

This is not a small decision as Diablo is now 20 years past its original planned-for operational life.

There is no margin for error.
