Diablo Canyon - do not extend the life of this location

We need a to move quickly to clean, reliable energy, and not keep Diablo Canyon open. The plan to close was carefully thought through and showed the cost benefits of closure. Our power should come from cheaper, cleaner wind and solar which will address our peak usage problems when we invest in storage and demand management. Diablo Canyon reduces the power available during peak times because system operators need to reserve power sources in case the facility has to shut down. Keeping this open will cost taxpayers billions of dollars, and instead we need to invest in the new clean technologies.
