Flexible demand response and storage, not brittle Diablo Canyon

The California Energy Commission does not exist to make PG&E bigger and more profitable. Serve people, business, industry and other government agencies best by facilitating installation of roof-top solar on every building, wharf, rail yard and parking lot. Support green hydrogen storage "batteries" in every community, in larger buildings and for heavy transport and tractors. Free us from the profit expansion grasp of our oversized privately owned "public utilities."
