Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Date:	12-13-2019
Citation:	23 CCR 16 2715(f) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(f)
Violation Description:	Failure to have a properly qualified service technician test leak detection equipment as required every 12 months (vapor, pressure, hydrostatic (VPH) system, sensors, line-leak detectors (LLD), automatic tank gauge (ATG), etc.).
Violation Notes:	Returned to compliance on 10/19/2020. Upon arrival, met with Tanknology technician and he stated that two of the vacuum sensors has no vacuum left and panel is indicating trouble. This is a reoccurring issue again and again each time we had an inspection. The vacuum sensor is continuously dropping for both S1 and S2. It was explained that the pump failed on 12/11/2019 and tech was dispatched to replace the pump but vacuum was not pulled. All systems functioning normal at time of inspection 10/19/2020.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: * Discovery
Completed Date: 09/24/1981
Comments: MONSANTO: Discovery. Facility identified from Superfund active site. On 11/25/81, facility drive-by. No evidence of waste visible. On 1/7/82 phone follow-up with plant manager. On 01/20/82, Inspection (state): ASP site inspection. On 03/31/82, Final strategy; identified abandoned site. On 11/01/82, Sample results: Mostly volatile organics in groundwater. On 01/20/87, Site screening done pending status due to RWQCB lead. Dump- site excavated 11/82. Source of Contamination currently being investigated by RWQCB. On 01/14/91, DHS received FIT SSI -EPA recommends NFA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 10/26/1992
Comments: The present level of contamination at the site poses a significant threat to public and environmental health. Therefore, PEA of high priority is recommended. The site consists of 25 acres of land. Both soil and groundwater were contaminated. Soil was contaminated by metals and solvents. Some of the metals were present in the on site soil are as follows: copper, lead, and nickel. The maximum level of 30 ppm of TCE was present in the groundwater and 100,000 ppm (see Note below) of cu was in the on site soil. Groundwater was contaminated by solvents including TCE. TCE levels in the groundwater was 30 ppm. Based on available information, there is a documented observe release at the site. The site poses a significant threat to public and environmental health. Therefore, PEA investigation is required. NOTE: Proposal for Final Cleanup Objectives, 1992 and Montn Technical Report on status compliance, CAMPSI Property, 1992

Lead Agency:	SAN FRANCISCO BAY RWQCB (REGION 2)
Lead Agency Case Number:	Not reported
Latitude:	37.370061
Longitude:	-121.950472
Case Type:	Cleanup Program Site
Case Worker:	DT
Local Agency:	Not reported
RB Case Number:	43S0496
File Location:	Regional Board
Potential Media Affected:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	* Solvents, Trichloroethylene (TCE)
Site History:	The Monsanto Company owned the site from about 1950-1983, the eastern portion of the property was developed and used by Monsanto for the manufacture of plastics and resins. Monsanto discharged liquid wastes on a portion of the property from the mid-1960s to 1975, and buried solid waste in seven trenches elsewhere on the property. Monsanto also maintained one or more above-ground tanks (removed in 1985) and an underground storage tank (UST), which was discovered in 1995. Volatile organic compounds (VOCs), fuel hydrocarbons, and other chemicals/wastes, including PCBs, have been found on the site. Monsanto commenced site investigations in 1981. The Regional Water Board adopted Site Cleanup Requirements (SCRs) in 1989 and ammended in 1991, and revised these in 1992. The site is currently regulated under SCR 92-106, and Waste Discharge Requirements (WDR) 90-160 for the reinfiltration of treated groundwater. SCR 92-106 was ammended in 1996 by SCR 96-140. Monsanto has undergone many property ownerships (in chronilogical order): Hunter Technology Corporation, CAMSI IV partnership, LafayetteHolding Corporation, Spieker Properties (May 16, 1995 - redeveloped to Lafayette Industrial Park), Equity Office Properties (June 2001) and RREEF America REIT II Corp. MMM (Summer 2004). A deed restriction is currently active on this property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

- File Location: All Files are on GeoTracker or in the Local Agency Database
- Local Case Number: 06S1W35L03f
- Potential Media Affect: Other Groundwater (uses other than drinking water)
- Potential Contaminants of Concern: Diesel
- Site History: A summary of groundwater analytical results for April 2012 Sampling Event is presented as follows: TPH-D concentrations ranged between 190 micrograms per liter (ug/L) in Well MW-6 and 5,300 ug/L in Well MW-3. TPH-G concentrations ranged between 590 ug/L in Well MW-6 and 7,200 ug/L in Well MW-3. Benzene concentrations ranged between 21

CALIFORNIA PAPERBOARD COM (Continued) **1000726757**

ug/L in Well MW-6 and 2,700 ug/L in Well MW-3. Toluene concentrations ranged between 1.8 ug/L in Well MW-6 and 40 ug/L in Well MW-4. Ethylbenzene concentrations ranged between 7.8 ug/L in Well MW-5 and 55 ug/L in Well MW-4. Ethylbenzene was not detected above the laboratory reporting limit (0.5 ug/L) in MW-6. Total xylenes concentrations ranged between 1.6 ug/L in Well MW-6 and 57 ug/L in Well MW-4. DEH has requested California Paperboard Company to submit a revised site assessment work plan by October 26, 2012.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

RB Case Number: 21-088
Local Agency: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: 06S1W35K06f
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History: 1992 In September, a waste oil underground storage tank was removed and a fuel leak investigation case was opened (06S1W35K05f) and the case closed on 9/20/96. 1997 In September, it is reported that a soil gas survey was conducted prior to a property transaction. The report of this work was not found in the file. The information presented here is from summaries contained in later reports. Maximum concentrations of 6,100 parts per billion by volume (ppbv) total purgeable petroleum hydrocarbons calculated as Gasoline (TPPH-g), 77 ppbv benzene, and 1,400 ppbv methyl tertiary butyl ether (MtBE) were detected. Locations of samples are not known. 1998 In December, 1 Geoprobe boring (EB1) was advanced onsite to 17 feet below the ground surface (ft bgs). 3 soil samples were collected and reported to contain maximum concentrations of 505 parts per million (ppm) Total Petroleum Hydrocarbons as Gasoline (TPHg), 0.0667 ppm benzene, 6.26 ppm Ethylbenzene, 2.56 ppm Xylenes, and 3.44 ppm MtBE. A grab groundwater sample was collected and reported to contain 17,000 parts per billion (ppb) TPHg, 74 ppb benzene, 197 ppb Toluene, 56.1 ppb Ethylbenzene, 2,130 ppb Xylenes, and 3,830 ppb MtBE. Product dispensers and piping were replaced. 4 soil samples (D1 through D4) were collected from beneath the dispensers between 2-2.5 ft bgs and 3 soil samples (P1 through P3) were collected along the piping at 2.5-3 ft bgs. The maximum concentrations reported for the piping samples was 12.2 ppm TPHg, 0.199 ppm Benzene, 0.045 ppm Toluene, 0.784 ppm Ethylbenzene, 0.194 ppm Xylenes, 2.75 ppm MtBE, and 18.7 ppm Total Lead. The maximum concentrations for the dispenser samples were 339 ppm TPHg, 1.99 ppm Benzene, 1.81 ppm Toluene, 5.16 ppm Ethylbenzene,

UNOCAL STATION #5290 (Continued) **S104541842**

13.8 ppm Xylenes, 84.6 ppm MtBE, and 20 ppm Total Lead. Additional excavation was conducted in the area of sample D1 to a depth of 6 ft bgs. Sample D1B was collected at 6 ft bgs and reported to contain 16.1 ppm TPHg, 0.013 ppm Benzene, 0.011 ppm Toluene, 0.17 ppm Ethylbenzene, 0.041 ppm Xylenes, and 1.89 ppm MtBE. 1999 In June, 3 groundwater monitoring wells (MW-1 through MW-3) were advanced to 15 ft bgs. 7 soil samples were collected and reported to have maximum concentrations of 1,300 ppm TPHg, 0.063 ppm Benzene, 2.5 ppm Toluene, 29 ppm Ethylbenzene, 130 ppm Xylenes, and 0.12 ppm MtBE. Periodic groundwater sampling began at the site. 2000 In March, a batch extraction test was conducted on a tank complex vadose monitoring well TB1. Reportedly, there are 3 tank complex vadose monitoring wells installed within the tank pit (TB1 through TB3). Approximately 50 gallons of groundwater were removed and the well was dewatered. Drawdown was not recorded in nearby wells. Another test was conducted on well MW1, which dewatered immediately and did not produce a significant volume of water. In August, 4 groundwater monitoring wells (MW-4 through MW-7) were installed on and offsite to approximately 15 ft bgs. Soil samples were not collected and submitted for laboratory analysis during this investigation. The new wells were incorporated into the monitoring program. 2001 In September, 5 Geoprobe borings (B1 through B5) were advanced onsite to 30 ft bgs as part of a transect study. 24 soil samples were collected and reported to have non-detectable to low concentrations of the Constituents of Concern (COCs). 15 depth discrete grab groundwater samples were collected. TPHg, Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX) were not reported to be present in any of the samples above the laboratory reporting limits. The maximum concentration of 45,000 ppb MtBE was reported for the sample collected from 11 ft bgs in boring B4. Deeper samples collected from this boring decreased to 3,500 ppb MtBE. 2002 In January and February, 8 Geoprobe borings (B6 through B13) were advanced offsite to depths ranging from 31 to 42 fbg as part of a transect study. 23 soil samples were collected and reported to have non-detectable to very low concentrations of COCs. 21 depth discrete grab groundwater samples were collected and reported to have maximum concentrations of 230 ppb TPHg, 1 ppb Benzene, 0.99 ppb Toluene, 1.2 ppb Ethylbenzene, 8.7 ppb Xylenes, and 840 ppb MtBE. The transect study concluded that dissolved TPPH-g (sic) and benzene impact downgradient of the site do not appear to warrant further investigation or remediation. And that the detected concentration of 840 ppb MtBE in the location of boring B-8, approximately 250 to the north of the site, is generally consistent with historical analytical data for existing monitoring well MW-7. And that the Dissolved MtBE impact approximately 500 feet north-northwest of the site attenuates to a concentration of 23 ppb, as quantified by analytical data for boring B-10, sampled during this investigation. In April, 3 shallow extraction wells (EW1, EW3 and EW4) to 25 ft bgs and 1 deeper extraction well (EW2) to 35 ft bgs were installed onsite. 10 soil samples were collected and reported to have non-detectable to low concentrations of COCs. The new wells were incorporated into the monitoring program. Wells EW2 and EW3 were installed adjacent to each other and based on the gauging data, there is an upward vertical hydraulic gradient from the deeper water-bearing zone toward the shallow water-bearing zone. In October, groundwater extraction from EW-1 and EW-3 commenced and continued through September 2004. Groundwater was extracted and stored in an onsite holding tank and hauled offsite. As of June 24, 2004,

UNOCAL STATION #5290 (Continued) **S104541842**

approximately 425,650 gallons of groundwater had been extracted, and approximately 4.0 pounds of TPH-g and 4.5 pounds of MTBE had been removed. 2003 In July, 2 groundwater monitoring wells (MW8 and MW9) were installed offsite to 17 ft bgs. 6 soil samples were collected and were not reported to have concentrations of the COCs above the laboratory reporting limits. The new wells were incorporated into the monitoring program. An underground conduit survey was conducted and concluded that a 78-inch storm drain beneath De La Cruz Boulevard and the telecommunication conduit beneath Martin Avenue were in contact with groundwater. Based on proximity, size, and local groundwater flow direction, the conduit likely to have the greatest influence for acting as a preferential pathway for the migration of hydrocarbon-impacted groundwater is the 78-inch storm drain that underlies De La Cruz Boulevard. Shaw also notes that the 33-inch storm drain and 24-inch sanitary sewer lines underlying De La Cruz Boulevard and the 12-inch sanitary sewer line and the 33-inch storm drain underlying Martin Avenue, may have been in contact with groundwater previously, based on historical depth to groundwater data. 2004 In August, 10 ozone sparge wells (C1 through C10) were installed between 18 and 22 ft bgs onsite. The ozone sparge system began operations in October and ran through May 2008. 2007 In September, 2 hydraulic hoists and 1 clarifier were removed from the site. 1 soil sample was collected from each hoist between 9.7 and 9.9 ft bgs and were reported to have maximum concentrations of 6.1 ppm TPH as Diesel (TPHd), and 53 ppm Hydraulic Oil. 3 soil samples were collected in association with the clarifier and piping; the depths of these samples were not reported. Maximum concentrations of 360 ppm TPHd, 2,300 ppm Hydraulic Oil and 110 ppm Total Oil and Grease (TOG) were reported for sample PIPE-2. Soil was excavated in the area of this sample to remove impacted soil and sample PIPE-3 was collected from 10 ft bgs. PIPE-3 was reported to contain 8.68 ppm TOG, 33 ppm Chromium, 18 ppm Nickel, 50 ppm Lead, and 53 ppm Zinc. Approximately 47.7 tons of soil was removed from the site.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RB Case Number:	43S0127
File Location:	Regional Board
Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil Vapor
Potential Contaminants of Concern:	Other Chlorinated Hydrocarbons, Benzene, * * METHYL ISOBUTYL KETONE, Xylene
Site History:	Organic solvents were first detected in the soils and groundwater at the site in March 1983. The organic solvents were determined to be from underground storage tanks used to store methyl isobutyl ketone (MIBK), methyl ethyl ketone (MEK), toluene, xylene, petroleum naphtha, fish oil, alkyd resin, gasoline and diesel fuel. The tanks, which ranged in age from 14 to 29 years, were emptied after the soil and groundwater contamination was detected. The underground storage tanks and surrounding soil were removed during the summer of 1985 and nine low-flow groundwater extraction wells were installed in the underlying aquifer systems. Site investigation activities conducted since 1987 include the drilling of over 50 boreholes, installation of over 25 groundwater monitoring wells, and extensive site characterization and remedial activities. Groundwater remediation strategy included the installation of groundwater extraction wells and interception trenches. The interception trenches were installed to prevent chemical-bearing groundwater from leaving the site. The pump and treat cleanup activities from extraction wells and interception trenches were conducted from 1987 to 1998. More recently, the Responsible Party began a pilot study using in-situ chemical oxidation (ISCO) to clean up a groundwater-benzene plume in the B Zone. Although preliminary resutls indicated some success, the study is not yet complete. The Board adopted Order number R2-2002-0104 (on October 16, 2002. The new Order instituted MNA as the site groundwater remedial alternative. Annual groundwater monitoring reports are prepared and submitted to the Board

Potential Media Affect:	Soil
Potential Contaminants of Concern:	Diesel
Site History:	The AT&T facility is located in a mixed commercial and industrial area in Santa Clara, California. A two-story building that houses offices and telephone switching equipment occupies the central portion of the site. North of the building, adjacent to the walkway leading to the main entrance was a former 1,000-gallon underground storage tank (UST) and three aboveground storage tanks (ASTs) that contained diesel fuel for a standby generator. AT&T is in the process of vacating the facility and no longer requires a standby generator at this facility. 2010 Tank Removal Activities November: Prior to the start of tank removal activities, AT&T arranged for the removal of the bulk of diesel fuel within the tank systems to be removed by AT&T's fuel supply vendor. Philips West Industrial Services transported 1,500 gallon of diesel fuel to Evergreen Oil recycling facility in Newark, California. Paradiso Mechanical, Inc. (Paradiso) began excavation activities of the fill material surrounding the UST and around the associated piping. The removed fill material was placed on polyethylene sheeting and stockpiled adjacent to the UST excavation pending removal. The interiors of the UST, ASTs, and day tanks were triple-rinsed by PSC Environmental Services (PSC) personnel using a fresh water/detergent mixture and a hot water pressure washer in order to remove any residual diesel fuel. The rinsate was removed from the tanks by a PSC vacuum truck, with the interior of the tanks then inspected to ensure all sludge and liquids had been removed: Following completion of rinsing activities, the rinsate and fuel was transported for disposal under manifest number 007751519 JJK to Evergreen Oil, Inc., in Newark, California. Paradiso personnel added approximately 75 lbs. of dry ice to the UST interior to inert its atmosphere. After approximately 1 hour, the lower explosion limit (LEL) and percent oxygen were measured at below 10%, with Ms. Giang Tran with the SCFD granting permission to remove the UST. After removal, both the UST and AST were inspected for signs of deterioration, holes, or leakage with none noted. However, discolored soils and a petroleum hydrocarbon odor were noted in the sidewalls of the UST excavation. Approximately 3 inches of water with a slight

AT&T MOBILITY (Continued) **S101542336**

sheen was also present in the excavation. At the base of the tank excavation was a concrete slab, at a depth of 10 feet below surface grade (bsg). Under the direction of Ms. Giang Tran with the SCFD, Shaw personnel collected one soil sample, labeled TP-1, from along the sidewall of the excavation at the soil-water interface. Due to the small volume present, a water sample was not collected. The soil sample was collected by pushing a brass sample tube into soils collected by the bucket of the backhoe. An additional soil sample, labeled PL-1, was also collected from the former pipeline trench at a depth of 4 feet below surface grade (bsg), two feet below the base of the trench. In order to evaluate fill material reuse and disposal options, Shaw personnel collected one four-point composite sample, labeled CS 1-4, by pushing brass sample tubes into the stockpile soil. The soil samples were submitted to McCampbell Analytical, Inc. (McCampbell) in Pittsburg, California for analysis for total petroleum hydrocarbons as diesel (TPH-D) via EPA Method 8015, and for benzene, toluene, ethylbenzene, and xylenes (BTEX) constituents via EPA Method 8260B. The samples were further analyzed for the fuel oxygenates tert-amyl methyl ether (TAME), tert-butyl alcohol (TBA), diisopropyl ether (DIPE), ethyl tert-butyl ether (ETBE), and methyl tert butyl ether (MTBE) via EPA Method 8260B. Results of the analysis reported TPH-D in the tank excavation sample TP-1 and pipeline sample PL-1 at concentrations of 2,200 milligrams per kilogram (mg/kg) and 3.3 mg/kg, respectively. TPH-D was also reported in the composite stockpile sample CS 1-4 at a concentration of 86 mg/kg. No other analytes were detected in any of the samples. Soil sample analytical results are presented in Attachment 3. No BTEX constituents or fuel oxygenates were reported in the analysis of any of the samples. Soil discoloration and a petroleum hydrocarbon odor were noted in the excavation sidewall. Approximately 3 inches of water with a slight sheen was also noted in the excavation. On November 23, 2010, the two tanks (1,000-gallon UST and the 2,000-gallon AST) were transported by PSC to Ecology Control Industries (ECI) facility in Richmond, California, for disposal under hazardous waste manifest 002135778 JJK. The removed piping and the 25-gallon and 50-gallon day tanks that had been placed into the 20-cubic yard bin was transported by PSC to ECI's facility for disposal under hazardous waste manifest 000011727 DAT. Following completion of tank removal and sampling activities, the excavation was temporarily backfilled with stockpiled fill material to prevent collapse of the sidewalls and potentially undermining the adjacent AT&T building. Due to the presence of impacted soils reported within the UST excavation, Shaw and AT&T planned to remove the backfilled material, over-excavate accessible hydrocarbon-impacted soils, and transport removed fill and soils to an appropriate offsite disposal facility. 2011 Soil Over-Excavation and Dewatering Activities In February, 2011, Paradiso Mechanical, Inc. (Paradiso) installed sheet-pile shoring around the former excavation in order to ensure the integrity of the adjacent building was not compromised during over-excavation activities. Paradiso then removed the fill material down to approximately 13 feet bsg, which was the original depth of the former USTs excavation. Following removal of the fill material, Paradiso widened the excavation to the extent of the sheet-pile shoring (15 feet by 20 feet), and deepened the excavation to 15 feet bsg, with ground water encountered at a depth of approximately 13 feet bsg. Approximately 165 cubic yards (213 tons) were excavated and transported for disposal by Intrinsic Transportation, Inc., (Intrinsic) to Ox Mountain Landfill in Half

AT&T MOBILITY (Continued) **S101542336**

Moon Bay, California. The excavation was dewatered by PSC Environmental Services (PSC) using a vacuum truck. Prior to purging, a moderate sheen was noted on the groundwater. A total of 5,000 gallons of groundwater were removed from the excavation and transported off-site for disposal. In March 2011, Shaw collected a sample, labeled GW-1, of the ground water within the excavation. The sample was analyzed for TPH-D, benzene, toluene, ethylbenzene, and xylenes (BTEX), and five fuels oxygenates tert-amyl methyl ether (TAME), t-butyl alcohol (TBA), diisopropyl ether (DIPE), ethyl tert-butyl ether (ETBE), and methyl tert-butyl ether (MTBE). Results of the sample analysis reported TPH-D and MTBE at concentrations of 18,000 micrograms per liter (ug/L) and 0.70 ug/L, respectively. No BTEX constituents or fuel oxygenates were reported in the analysis. The excavation was dewatered again by PSC, with an additional 4,500 gallons of groundwater removed. Before purging began, a slight sheen was noted on the groundwater. On March 8, 2011, after allowing the excavation to recharge overnight, Shaw collected two confirmation groundwater samples, labeled GW-2 and GW-2-F, from the excavation using disposable bailers as before. The samples were analyzed for TPH-D only under EPA Method 8015B, and sample GW-2-F was filtered and then analyzed for TPH-D to determine if sediment within the groundwater was impacting sample results. Results of the analysis reported TPH-D in both samples GW-2 and GW-2-F at a concentration of 150 ug/L. The fuel oxygenate MTBE was also reported in sample GW-2-F at 0.57 ug/L. 2013 In March 2013, a fifth round of groundwater sampling was conducted. Water level elevations ranged from 43.61 feet above msl in well MW-2 to 40.79 feet above msl in well MW-3. The direction of the groundwater gradient was to the southwest at approximately 0.10 ft/ft. Results of the groundwater sample analysis reported TPH-D in all five wells ranging from 230 ug/L in MW-4 and MW-5, to 580 ug/L in MW-1. Concentrations of all other constituents (TPH-G, BTEX, five fuel oxygenates, and lead scavengers) were reported below the laboratory detection limits in all five monitoring wells. Based upon previous groundwater sampling results, Shaw and AT&T believed the TPH-D results to be anomalous and not reflective of groundwater conditions. As a result, Shaw mobilized to the site on May 2, 2013 to resample all five monitoring wells for TPH-D. Laboratory analytical results for the May 2, 2013 sampling reported TPH-D below laboratory detection limits in MW-2, MW-3, MW-4, and MW-5. TPH-D was reported in MW-1 at a concentration of 43 ug/L. In June 2013, a sixth round of groundwater sampling was conducted. Water level elevations in wells ranged from 40.60 feet above msl in well MW-1 to 43.64 feet above msl in well MW-2. The direction of the groundwater gradient was to the southwest at approximately 0.10 ft/ft. Results of the groundwater sample analysis reported concentrations of all constituents (TPH-G, TPH-D, BTEX, five fuel oxygenates, and lead scavengers) were reported below the laboratory detection limits in all five monitoring wells. Additional Site Assessment In September 2013, four direct-push borings were advanced by National Exploration of Woodland, California, a C- 57 licensed driller. Each boring was initiated by hand-digging the first few feet of each location to clearly unmarked utilities. The boring were then cored continuously using a 48-inch-long core direct-push sampler lined with clear, Lexan sample tubes. The soil cores were used for lithologic evaluation and field screening of organic vapors. Headspace screening for organic vapors was accomplished using a photo ionization detector (PID). Two samples were collected from each

AT&T MOBILITY (Continued) **S101542336**

boring, with one sample from the 0- to 5-foot depth interval and another sample from the 5- to 10-foot depth interval. Sample locations were determined by visual observation and PID readings. If groundwater was encountered, a sample from the capillary fringe was collected. The soil samples were submitted to Pace Analytical in Minneapolis, Minnesota, an ELAP certified laboratory for analysis for TPH-D under EPA Method 8015 (modified), and for BTEX constituents and naphthalene by EPA Method 82608. Laboratory analytical data reported TPH-D, BTEX, and naphthalene concentrations were below laboratory detection limits in all samples with the exception of TPH-D in sample SB-6-7 which was reported at 16.7 mg/kg. The concentration of TPH-D in SB-6 is below the San Francisco RWQCB's Environmental Screening Level for Residential Properties (shallow soils, 3 meters, groundwater is a potential drinking water source of drinking water). In August 2013, Shaw reviewed regulatory and database records to assess for sensitive receptors. The following are the key findings: DWR records indicate that well installation records for 950 wells have been submitted within 2,000 feet of the subject site in the Santa Clara area. Most of the wells were reported as geologic test wells or groundwater monitoring wells and are not considered sensitive receptors. Two of the reported well records were not identified as test or traditional monitoring wells. Based on their intended use and approximate distance from the AT&T facility, these two wells are not considered potential sensitive receptors to the subject site. Approximately 10 additional well records were provided which did not identify a concise location in relation to the subject site. The Guadalupe River and Saratoga Creek are the closest surface water bodies to the subject site, located approximately 1.2 miles northeast and 0.85 miles west of the site. Based on the depth of the contaminants of concern and utilities, and the paving which covers the property, it is unlikely that site-related contamination (if any) is entering site surface water pathways. Most recent ground water sampling at the subject site did not indicate any contaminants of concern in site monitoring wells. The City of Santa Clara Water Utility supplies drinking water to Santa Clara. Water in the vicinity of the subject site is obtained primarily from water wells. However, the City also imports a portion of the water supply from the San Francisco Hetch Hetchy system and from SCVWD. Drinking water received from this system as a whole is tested on a regular basis, per USEPA and California standards. Two of the reported well records within 2,000 feet of the subject site were not identified as test or traditional monitoring wells. Based on their intended use and approximate distance from the AT&T facility, these two wells are not considered potential sensitive receptors to the subject site. The impacted area on the subject site is paved with asphalt and concrete, which should preclude any human contact with petroleum-impacted ground water that has been reported at depths ranging from approximately five to six and a half feet bsg. It is very unlikely for workers to come in contact with impacted groundwater during subgrade construction activities. No sensitive receptors were identified during the execution of the SRS.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
HAZARDOUS AIR POLLUTANT MAJOR
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Site Name: Mission Trail Waste Systems
Violation Date: 08-15-2015
Citation: 2014-0057-DWQ - Industrial General Permit
Violation Description: SW - Failure to Obtain Permit
Violation Notes: Failure to recertify permit coverage under IGP 2014-0057-DWQ
Violation Division: Water Boards
Violation Program: INDSTW
Violation Source: SMARTS

Site ID: 537125
Site Name: Mission Trail Waste Systems
Violation Date: 02-22-2010
Citation: 2014-0057-DWQ - Industrial General Permit
Violation Description: SW - Deficient BMP Implementation
Violation Notes: Various BMP violations.
Violation Division: Water Boards
Violation Program: INDSTW
Violation Source: SMARTS

Site ID: 537125
Site Name: Mission Trail Waste Systems
Violation Date: 07-02-2013
Citation: 2014-0057-DWQ - Industrial General Permit
Violation Description: SW - Late Report
Violation Notes: missing annual report
Violation Division: Water Boards
Violation Program: INDSTW
Violation Source: SMARTS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-22-2010
Violations Found: Yes
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Not reported
Eval Division: Water Boards
Eval Program: INDSTW
Eval Source: SMARTS

Enforcement Action:
Site ID: 537125
Site Name: Mission Trail Waste Systems
Site Address: 1060 RICHARD AVE
Site City: SANTA CLARA
Site Zip: 95050
Enf Action Date: 01-30-2014
Enf Action Type: Industrial Storm Water Enforcement
Enf Action Description: Industrial Storm Water Enforcement
Enf Action Notes: Notice of Noncompliance for missing 2012-13 Annual Report
Enf Action Division: Water Boards
Enf Action Program: INDSTW
Enf Action Source: SMARTS

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Completion Report
Completed Date:	01/20/1983
Comments:	In November 1981, the Department of Health Services (DHS), predecessor to the Department of Toxic Substances Control (DTSC), collected information after a routine Interim Status Document (ISD) inspection indicating that the plant was to be closed and demolished. Samples taken by DHS in August 1982 contained asbestos, with levels as high as 6% (plus or minus 4%). Cleanup of the site was required by DHS. The responsibility for site cleanup was placed upon Certainteed. Cleanup activities were overseen by DHS and included the removal of any asbestos fibers in the buildings and on the surface of the property, along with the removal of soil below the settling basin and drying area down to 5 feet. Also, all transformers and capacitors containing PCBs were removed. Additional soil samples were taken and analyzed for asbestos during site cleanup activities. Asbestos levels were less than 1% in samples, the cleanup level goal set by DHS, and the transformers and capacitors containing PCBs were removed from the site.

Background Info:	Certainteed Corporation occupied this 26-acre site from

CERTAINTEED, SANTA CLARA (Continued) **S100269969**

1962-1982 and manufactured asbestos-cement pipes, products storage, asbestos fiber storage and a settling basin for asbestos slurry. The asbestos fibers were collected using a vacuum system and stored in bags to be removed periodically. The slurry was collected by means of a drainage ditch which led to a settling basin. The previous owner of the property was Keasby and Mattison, also a manufacturer of asbestos pipe at the site from 1953-1962. Operations entailed the mixing of around 12% asbestos fiber with 60% concrete. Due to recycling of slurry, varying amounts of slurry and concrete were added to 12% asbestos. During the operation of Certainteed, the company gave permission for the storage of components from other companies (their origins unknown). Some of these components included transformers and conductors, both containing polychlorinated biphenyls (PCBs).

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D003
Waste Description: REACTIVE WASTE

Waste Code: D004
Waste Description: ARSENIC

Waste Code: D007
Waste Description: CHROMIUM

Waste Code: D008
Waste Description: LEAD

Waste Code: D009
Waste Description: MERCURY

Waste Code: D011
Waste Description: SILVER

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE

TTM TECHNOLOGIES NORTH AMERICA, LLC (Continued) **1000294711**

ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F006
Waste Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code: F007
Waste Description: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Waste Code: F008
Waste Description: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: U122
Waste Description: FORMALDEHYDE

Waste Code: U219
Waste Description: THIOUREA

Environmental Interest/Information System:

AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
STATE MASTER
HAZARDOUS WASTE BIENNIAL REPORTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Longitude: -121.950236
Case Type: Cleanup Program Site
Case Worker: UUU
Local Agency: Not reported
RB Case Number: 43-1925
File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: * Solvents, Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History: chlorinated solvent released from UST. TCE and PCE are the primary VOCs. SVE was conducted from 1990 to 1993. Some of the monitoring wells were abandoned in December 1996. It is not clear if the remaining seven wells were abandoned. A draft deed restriction was prepared (it is not clear if it was recorded).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1 Addendum
Completed Date: 12/11/2015
Comments: California Environmental Management, the consultant to the owner of Pyramid Circuits, submitted an "Environmental Assessment for Closure" report to DTSC to provide the basis for changing the site status to no further action. The report details the regulatory closure of the Pyramid Circuits facility under the oversight of the Santa Clara Fire Department (the Certified Unified Program Agency with jurisdiction), the cleanup and removal of minor copper contamination in soil, and the cyanide detections in soil and evaluation of the results. No releases at the site have been documented and hazardous materials usage occurred within a designated section of the building with containment. The cyanide detected in soil was at levels well below screening levels that are protective of human health.

Completed Area Name: PROJECT WIDE

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit

PYRAMID CIRCUITS INC. (Continued) **1000149808**

Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Latitude:	37.36321
Longitude:	-121.93874
Case Type:	Cleanup Program Site
Case Worker:	MBR
Local Agency:	Not reported
RB Case Number:	43S0305
File Location:	All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected:	Soil
Potential Contaminants of Concern:	Chromium, Copper, Lead, Nickel, Waste Oil / Motor / Hydraulic / Lubricating
Site History:	The October 5, 1992, Sump Removal Soil Sample Laboratory Report that presents soil data collected during the excavation and sump removal on September 23, 1992. This results showed low concentrations of metals (chromium, lead, copper, and nickel), petroleum hydrocarbons, and methyl chloride in soil. The metal and petroleum hydrocarbon concentration are all less than our commercial environmental screening levels (ESLs). The maximum methyl chloride concentration of 8.64 milligrams per kilogram (mg/kg) exceeds our commercial ESL of 0.19 mg/kg associated with potential leaching to groundwater concerns but is below our commercial ESL of 25 mg/kg associated with direct exposure to soil. Based on the August 16, 1993, Addendum to the Environmental Assessment that concludes that there is low likelihood of hazardous materials present in the subsurface from the former underground storage tank (former sump). This conclusion was based on a regulatory agency file review and personal communications with staff of the Santa Clara Valley Water District who stated that there was no evidence of a release of fuel based on visual inspection of the sump and soil within the excavation and the soil analytical data. Based on the above information, we closed this case on June 16, 2020.

Case Type:	Cleanup Program Site
Case Worker:	MD
Local Agency:	Not reported
RB Case Number:	43S0076
File Location:	All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil Vapor
Potential Contaminants of Concern:	Acetone, Other Chlorinated Hydrocarbons, Other Solvent or Non-Petroleum Hydrocarbon, Tetrachloroethylene (PCE), Toluene, Xylene
Site History:	The Regional Water Board has been the regulatory oversight for the site since at least 1985 and the site is currently under site cleanup requirements (order) 96-038. The site was a magnetic tape manufacturing facility where volatile organic compounds (VOCs) including methyl ethyl ketone (MEK or 2-butanone), cyclohexanone, and petroleum hydrocarbons were released to the subsurface during historical operations. The discharger operated solvent storage, distribution, and recovery systems which include underground storage tanks (USTs) used to store methyl ethyl ketone, xylenes, cyclohexanone, isopropanol, acetate, and diesel. Memorex ceased all manufacturing activities at the site on November 16, 1993. Current owner is renting the property to industrial tenants. Site investigations began in 1982 and solvents (VOCs) were detected in soil and groundwater. A groundwater extraction system operated in 1983. In 1989, underground piping connect to solvent tanks failed and discharged to the subsurface. in 1990 and 1991, several USTs and associated piping were removed. Groundwater flow directions is towards the northeast and the depth to groundwater has ranged from approximately 6 to 8 feet below grade (fbg). No cyclohexanone or MEK are detected. Only acetone is detected and the maximum concentration in 2014 was 75.6 micrograms per liter (ug/L), which is below the Regional Water Board, SF Bay Region, environmental screening level (ESL) of 14,000 ug/L. No other VOCs are detected. A soil vapor extraction (SVE) system operated from 1996/1997 to December 14, 2015. Thirteen SVE wells were installed to approximately 7 fbg; however, not all SVE wells operated. In 2011, 3 sub-slab vapor samples (SV-1 through SV-3) were installed from beneath the former wet process area, and the reported concentrations of VOCs in the samples were below published environmental screening levels (ESLs) for commercial and industrial properties. In 2015, 6 additional sub-slab vapor probes were installed (SV-4, SV-5, and SV-7 through SV-10) to characterize soil vapor quality in the areas where existing SVE well

MEMOREX-1200 MEMOREX DR (Continued) **S103977072**

vaults are obstructed. Sub-slab vapor probes and accessible SVE wells (V-1 through V-5 and V-12) were sampled in 2015 and 2016. The 6 sub-slab vapor probes were installed between June 16 and 18, 2015 and sampled two days after installation. Prior to sampling, the SVE system was shut down. The Regional Water Board approved a work plan for a soil vapor rebound assessment to evaluate the effectiveness of the SVE system in removing subsurface contaminants, the need for additional vapor intrusion monitoring, and whether the site is a candidate for no further action and case closure. In 2014, a limited subsurface investigation was completed for the property owner that included grab-groundwater and soil vapor assessment across the entire site. Soil vapor sampling was completed in 2015 and 2016. No indoor air sampling has been completed. Maximum concentrations in soil gas presented below are above the 2019 commercial ESLs: PCE = 150 micrograms per cubic meter (ug/m3) Benzene = 45 ug/m3 Ethylbenzene = 170 ug/m3 On December 18, 2017, the Regional Water Board request the site be evaluated for low-threat case closure. A conceptual site model and closure evaluation report (Report) was submitted on August 28, 2019 per our December 18, 2017, letter to evaluate current conditions and determine if it is a candidate for closure. The Report identified data gaps and recommended additional onsite assessment. Our October 29, 2019, email approved the Report and requested a vapor intrusion assessment workplan by January 15, 2020. The workplan due date has been extended to March 30, 2020.

Waste Code: D007
Waste Description: CHROMIUM

Waste Code: F006
Waste Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code: F019
Waste Description: WASTEWATER TREATMENT SLUDGES FROM THE CHEMICAL CONVERSION COATING OF ALUMINUM, EXCEPT FROM ZIRCONIUM PHOSPHATING IN ALUMINUM CAN WASHING WHEN SUCH PHOSPHATING IS AN EXCLUSIVE CONVERSION COATING PROCESS.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
STATE MASTER
HAZARDOUS WASTE BIENNIAL REPORTER

Click Here:

Environmental Interest/Information System:
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS AIR POLLUTANT MAJOR

Local Agency:	SANTA CLARA COUNTY LOP
File Location:	All Files are on GeoTracker or in the Local Agency Database
Local Case Number:	06S1W34R01f
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	Site history as of July 2012: Two releases at this site - one from a gasoline UST and another from a diesel UST. The Site is located on the north side of Memorex Drive in Santa Clara, CA, and is currently operated as a steel treating facility. A gasoline underground storage tank (UST) was removed from the Site in 1986, and in May 2011 an abandoned diesel UST was discovered and removed. The diesel UST may have been owned by Kraft Foods and used to fuel delivery trucks. The abandoned diesel UST, and likely co-contributor, was discovered adjacent to MW-2 at 1185 Memorex Drive (which is part of this same property) and removed in May 2011 with ORC added to the excavation prior to backfilling. Treatment of the UST excavation with ORC appears to have significantly decreased contaminant concentrations in monitor well MW-2, located adjacent to the former excavation. Ground water monitor wells were installed in 1999 and 2002 and have been sampled semi-annually since 2002. Quarterly monitoring has occurred since August 2011 in order to evaluate the effectiveness of the May 2011 UST removal and remediation. Based on the results of ground water monitoring performed at 1225 Memorex Drive ground water gradient direction is to the north at an average of 0.0071 feet per foot which is consistent with historical trends and regional topography.

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

BYINGTON STEEL TREATING, INC (Continued) **1000315381**

corrective action activities required under RCRA.
