## **What Qualifies**

I seek funding go toward an amazing way to lower cost of energy by designing/building US made Large Floating Docks (LFD) for Floating Offshore Wind Energy (FOWE). Think of these LFD's are special vessels that do same tasking as Humbolt's fixed port new construction/upgrades at same or in some cases less costs. These kind of mobile vessels were in place for Naval uses, canals, and other marine needs over the years. LFD's made for FOSW are a secondary affordable way for California and the United States to lower the overall cost of energy for effectively adding long lasting and major FOWE to our grid at the pace national and state governments have promoted we Americans and Californians are asked to mobilize at. If EPIC ends up not wanting to help fund this, then I seek to find out what other program(s) I can mobilize California companies and applicants toward. Thanks for supporting Thank you.
