Collaboration timelines

I'm interested in how the CEC CIP will prioritize, or allow for, collaborative projects that may not have parallel timelines? eg: adding broadband while trenching for ev infrastructure while paving/surface improvements. Each of these projects could have separate funding sources, timelines, approval requirements. Is there any way to make accommodations for this type of scenario? Perhaps be able to indicate on the application?

Collaboration/coordination between projects would save energy, cost, time, and improve public perception of use of public funds. This is not directly addressed by various funders. Is there a remedy? CIP recognition of this issue and a workaround would be innovative and productive.

Thank you,
Kristin Thigpen, GHD
