## **FPT Industrial supports the use of HVO renewable diesel in genset engines**

As a manufacturer of the latest generation of engines for both prime power and emergency backup gensets, FPT Industrial approves the use of renewable diesel, as known as hydrogenated vegetable oil (HVO) in our current product offering in the state of California. The utilization of this fuel as a drop-in replacement for petroleum-based diesel fuel offers a straight-forward, cost-effective and pragmatic option for addressing the objectives of the Clean Energy Reliability Investment Plan. It is worth noting the California Air Resources Board has also adopted measures recently to increase the use of this fuel in the off-road and marine sectors. We remain available to provide further information about our engines and the use of this fuel.
