Docket Number: 22-ERDD-03

Bioenergy and H2 utilization

The intent of a Clean Hydrogen Program should be to support any technology that can produce green hydrogen. The program should not limit how green hydrogen is used; the market will make that determination.

An open program increases the potential technical solutions and will legitimize the end uses. Putting a limitation on refiners using green hydrogen is counterproductive.

Conversion technologies that utilize biomass present a significant opportunity to produce renewable fuels that replace fossil fuels. Using the state's abundant biomass resources will avoid the GHG emissions from open burning, decay, and wildfires. Green hydrogen production from biomass is a perfect fit for the Clean Hydrogen Program.
