Make the rebates retroactive please!

Thank you for this amazing opportunity for me to do the right thing for the climate and my energy bills!

Please make the rebates retroactive: Holding rebates back punishes those who acted quickly, based on assurances from contractors and limited government releases that any work done in 2023 would be eligible for the rebates. For those of use on low and/or fixed incomes, this can be devastating.

Failure to make the rebates available now means another delay, perhaps of a year, before this vital climate-change mitigation action would really start up.

Delaying the implementation of the rebates will mean that there will be a huge crush when the money does become available. There will not be enough contractors to deal with the crush, and PG&E will be totally overwhelmed (they are STILL greatly delayed by the rush to solar caused by the April deadline for grandfathering in solar sell-back at the higher rates).
