Hydrogen Production Method

Hi

My company produce hydrogen on demand using a novel metal hydride and water combination. We use the zero emission hydrogen to create electricity in a man portable generator, ideal, safe and easy to use indoors to power home appliances. Our unit replaces the fossil based generators and provides continuous energy for medical devices, communication and work tools (batteries and solar are unable to match the power produced by our generator). Is this request for funding allowing novel technology that creates hydrogen by a means other than water/electrolysis?

Thanks

Mark Collins
