GHG Reduction Technology

I am writing to request that GHG reduction technology be kept in FPIP 2.0 as it is not only key to supporting the electrification of industries but that the emissions reductions are especially impactful for neighboring priority populations. Excluding GHG reduction technology would be to the detriment of advancing the decarbonization of the food processing industry and helps achieve three of the four priorities of the grant funding, including:

1) Help California food processors work towards a low-carbon future, 2) Demonstrate reliability and effectiveness of advanced energy and decarbonization technologies and strategies, and 3) Benefit or improve public health and the environment, particularly in priority populations.
