Role of PPA plant owner in DSGS

DSGS participation for power plant owners with site related PPA

In one of your attached presentations titled "demand-side grid support program guidelines, second edition" proposed draft program guidelines, on page 13, of 45

Under eligible participants part B3 it states a participant is not eligible to receive incentives. If the participants resource with the DSGS provider is a cogeneration facility with a power purchase agreement.

Does this preclude power plant owners that provide the power purchase agreement to the site host behind the meter from participating with excess capacity to participate in the program?

Or is the statement a statement of eligibility specifically targeted towards the customer who is not in control or ownership of the plant who is receiving the benefits of the power purchase agreement?

Thank you in advance for clarifications!
