Diablo Canyon

I served on the USS Hawkbill SSN666 from 1969 to 1973, a nuclear powered submarine. In 1999 after 29 years the Hawkbill was decommissioned because the Navy could not justify the cost or assure the safety of continued operation. Nuclear reactors have a limited life cycle. This is true of the Diablo reactors as well.

As a long time California resident I have experienced many earthquakes, most notably the 1989 Loma Prieta earthquake. It is not reasonable that the Diablo Canyon reactors be allowed to operate in such close proximity to active earthquake faults.

Shift our resources to renewable energy now.
