Just say NO to Diablo Canyon

Diablo Canyon Power Plant should be CLOSED in 2024 as agreed upon. It is old and has been absorbing radioactivity for years. Older is not better. The plant sits on the mighty San Andreas Fault system—think Fukijima. An accident would ruin our Central California Coastline, its people, flora, fauna and economy. Our Leaders should have anticipated the closure by promoting and installing new wind and solar energy. What were they doing? Thinking? Nuclear power gambles with our future and PGE isn't up to the task. It isn't worth the risk. Just say No to Diablo Canyon.
