More flexibility for Grant

Dear Grant Program Managers,

Coreshell would like to submit the following feedback for the grant:

- More flexibility in the starting TRL levels (6-8) of the grant would allow for a more robust application pool. The merits of the overall potential success of the end product could still be measured the same even if the starting TRL is more flexible.
- Cell manufacturing is one of the biggest missing pieces in CA and in the US and we would ask the program managers to consider allowing Cell manufacturing to be considered. Again, the end metrics of success could still be the same and it would allow consideration of some potentially beneficial projects to the state that might be missed without it.
- Flexible funding up to \$15M is a good idea considering the gap in government funding opportunities between \$5M (R&D) to \$50+M (full manufacturing).

Thank you for your consideration,
Jonathan Tan
on behalf of Coreshell Technologies, Inc.
