What is the unique identification number given to each regulatory action that has been assigned to this project pursuant to Government Code section 11341? I believe it would be found on the Form 400 for the regulatory action for which a notice has already been published in the California Regulatory Notice Register. The unique identification number and the Form 400 are not found in the docket 23-OIR-02. The identification number shall be sufficient information for a member of the public to identify and track a regulatory action both with the office and the state agency taking the regulatory action. No other information pertaining to the regulatory action shall be required of a member of the public if the identification number of the regulatory action has been provided.

What are the environmental effects of any delays in keeping regulations updated by not implementing California State Legislative bills such as SB100 chapter 312 2018 that was approved by the Governor on September 10, 2018 and filed with Secretary of State on September 10, 2018? I believe common sense would have the continuation of SB100 prohibited resource shuffling in power content labels, misinforming the public as to a accurate accounting of greenhouse gases produced by using electricity would have a significant effect on the environment because of delays in processing [rulemaking petitions](#).

I ask these questions because this document [Memo re California Environmental Quality Act Compliance - TN252683\\_20231023T132434\\_Memo re California Environmental Quality Act Compliance.pdf](#) questions if this action is a project and its effects on the environment.
