## **Want my next car to be a FCEV**

Thank you for this workshop to work towards improving the availability and pricing of H2 for FCEVs. I teach occasional classes on the science of climate change, so I am well aware of the need to change how we power our transportation system.

I currently drive a plug-in hybrid, which I love for the approximate 50% reduction in my carbon emissions from driving. I view this as my transition vehicle, with my next vehicle being a full EV. I would like that next vehicle to be hydrogen powered, not battery powered. I view hydrogen as the cleanest type of vehicle available, provided it is powered by sustainably produced hydrogen.

Unfortunately, the current state of H2 refueling options is inadequate to meet my current or future needs. So, thank you for your work to improve this situation.
