Cost-share from end-use partners

To demonstrate consumption of the hydrogen produced on-site, an end-user partner in this project would have their own costs associated with being involved in the project. For example, the partner may temporarily provide a vehicle(s) and operator(s) to use the on-site hydrogen, and their time and costs are not free. Could their costs be considered "in-kind" contributions that would count towards the 50% cost share?
