Fountain Wind Project

California can not produce enough electricity now to keep all of the air conditioners and other home needs running in the summers. If we are going through global warming, as most people believe, the problem is destined to only get worse. In addition if California is going to get rid of all internal combustion engines and go all EV by 2035 the demand will grow exponentially. We have already been asked not to charge EV vehicles for a period because of electric shortage.

You can not have it both ways, you must back off of wanting to slow global warming or accept progress. Wind power is available and relatively inexpensive. Stop the childish excuses and accept the future.
