VSFB - Eligible Costs

During the meeting, it was reiterated several times that eligible costs included those servicing EV charging facilities exclusively. One limiting factor for installing EV chargers at Vandenberg Space Force Base is that much of our existing electrical infrastructure is out of date or at/near capacity (transformers and panels). If we could use the grant funding to upgrade electrical infrastructure intended to accommodate installation of EV charging facilities in the future while servicing other areas, we would be more incentivized to apply. This could potentially accelerate our non-tactical GOV fleet electrification effort considerably, particularly with respect to the electrical component market backlog of up to two years.
