Less red tape, more green power

Commenting in enthusiastic support of this project. Phasing out fossil fuels requires building new electricity generation and transmission at scale, and this is a good site for a wind project. Green jobs are good jobs.

To help overcome the tinfoil-hat-wearers or other NIMBYs I'd suggest taking a poll or having a contest for the details of *how* to build it, to show the breadth of support for whether to build it. A lot of people who would support this project are too busy or unaware to speak up for it. If people are having a low-stakes debate over what to name each turbine or a logo, they'll be paying enough attention to show how much support is there. (I would suggest a turbine named "Don Quixote" - a classic reference)
