Suggested changes on reliability, access, and data reporting

Dear California Energy Commission;

I encourage you to:

Alter 6.1(o) to:

Must ensure a minimum of 97% uptime of all Level 2 EVSEs through suitable 3rd party certified EVSE, e.g. NEMA 3R, etc, which are suited for reliable electronics function in the intended ambient charging environment and receiving CIC Incentives

Diminish the requirement and allow up to 19% EVSE not shared

"All Level 2 EVSEs must be shared and may not be assigned or otherwise allocated to any one individual except for 1X% which will be allowed at sites meeting the following criteria."

and to modify 6.2.2 (b) i " xviii EVSE Usage Data Collection" to allow more project types as % of sites where, e.g. 100% of site EVSE offer free charging (not networked)
