Feedback of RFP (GEM)

Refering to the items RFI is requesting feedback on:
1.A: Best practices of braiding: trat this issue as a data integration problem, requiring automated system, with the options of rebate, incentive or direct install. Authentication and verification of the requestor, followed by proof of purchase or project, receipt and so forth. This works best and most scalable, secure and has embedded governance.
2. A.
I. calculation carbon credits and assign those to the state.
II. Interactive application, similar to the 1.A response.
III. No answer here.
IV. B. Yes, need to make sure no double counting, as part of each transaction request.
IV. C. Absolutely: best strategy is to use a data management platform (there are a few out there) that has the ability to easily and securely connect all websites, documents and interfaces into one and make sure compliance and governance are maintained, as well as ease of use.
2.B
I. Start with fixed since its simpler to model, but roll out variable as 2nd step.
III. build caps into the system implemented, those will be accumulate per household project.
IV. Platform digital documentation that is unified, governed, auditable. Its been done many times. Need just to use standard methods.
