California Energy Commission  
Re: Docket No. 24-BSTD-01  
P Street Sacramento, CA 95814  
[docket@energy.ca.gov](mailto:docket@energy.ca.gov)

Dear Commissioners,

A more comfortable population is healthier and more rational.

The CEC must adopt a 2025 building code that requires air conditioners to be replaced with heat pumps at their end of life. Our communities are experiencing unprecedented health and economic impacts from wildfires, heat waves, and droughts. The same fossil fuels causing climate change are also disproportionately burdening low-income communities and communities of color with some of the most polluted air in the nation. We want healthy, clean air solutions, and we are looking to you, our state energy representatives, to curb pollution by reducing gas use in our homes and communities.

Sincerely,

Joseph Woodard  
Alameda, CA

California Energy Commission  
Re: Docket No. 24-BSTD-01  
P Street Sacramento, CA 95814  
[docket@energy.ca.gov](mailto:docket@energy.ca.gov)

Dear Commissioners,

As a homeowner looking to replace my HVAC system and water heater with heat pump units, I wholeheartedly support a change in standards to the 2025 Building Codes. We need to move as fast as possible to reduce our greenhouse gas production to ameliorate some of the effects of planetary warming.

The CEC must adopt a 2025 building code that requires air conditioners to be replaced with heat pumps at their end of life. Our communities are experiencing unprecedented health and economic impacts from wildfires, heat waves, and droughts. The same fossil fuels causing climate change are also disproportionately burdening low-income communities and communities of color with some of the most polluted air in the nation. We want healthy, clean air solutions, and we are looking to you, our state energy representatives, to curb pollution by reducing gas use in our homes and communities.

California Energy Commission  
Re: Docket No. 24-BSTD-01  
P Street Sacramento, CA 95814  
[docket@energy.ca.gov](mailto:docket@energy.ca.gov)

Dear Commissioners,

As climate change continues to accelerate we need to address the effects of fossil fuel air pollution in our homes. By replacing old central AC units in buildings with heat pumps we can reduce indoor air pollution, fossil fuel dependency and lower energy bills for many residences. We will also be protected from the large fluctuations in gas prices that have led to suddenly very high utility bills. Please instruct the California Energy Commission to require old ACs be replaced by heat pumps in the 2025 Building Codes. California can once again be at the forefront of smart legislation that reduces fossil fuel use, provides cleaner air and moves us closer to a zero emission future. Thank you for considering, Evan Elias

The CEC must adopt a 2025 building code that requires air conditioners to be replaced with heat pumps at their end of life. Our communities are experiencing unprecedented health and economic impacts from wildfires, heat waves, and droughts. The same fossil fuels causing climate change are also disproportionately burdening low-income communities and communities of color with some of the most polluted air in the nation. P Street Sacramento, CA 95814  
[docket@energy.ca.gov](mailto:docket@energy.ca.gov)

Dear Commissioners,

I am the father of an amazing ten year old and I'm very concerned about her future in the face of climate change unless we collectively do everything within our power to transition away from burning fossil fuels as quickly as is humanly possible. We must address climate change with the urgency that it demands and deserves.

The CEC must adopt a 2025 building code that requires air conditioners to be replaced with heat pumps at their end of life. Our communities are experiencing unprecedented health and economic impacts from wildfires, heat waves, and droughts. The same fossil fuels causing climate change are also disproportionately burdening low-income communities and communities of color with some of the most polluted air in the nation. We want healthy, clean air solutions, and we are looking to you, our state energy representatives, to curb pollution by reducing gas use in our homes and communities.

Re: Docket No. 24-BSTD-01  
P Street Sacramento, CA 95814  
[docket@energy.ca.gov](mailto:docket@energy.ca.gov)

Dear Commissioners,

Make homes safer AND more eco-friendly!!!

The CEC must adopt a 2025 building code that requires air conditioners to be replaced with heat pumps at their end of life. Our communities are experiencing unprecedented health and economic impacts from wildfires, heat waves, and droughts. The same fossil fuels causing climate change are also disproportionately burdening low-income communities and communities of color with some of the most polluted air in the nation. We want healthy, clean air solutions, and we are looking to you, our state energy representatives, to curb pollution by reducing gas use in our homes and communities.

Sincerely,

Tab Buckner

Dear Commissioners,

The CEC has done so much damage to our climate goals, please do something helpful for once!

The CEC must adopt a 2025 building code that requires air conditioners to be replaced with heat pumps at their end of life. Our communities are experiencing unprecedented health and economic impacts from wildfires, heat waves, and droughts. The same fossil fuels causing climate change are also disproportionately burdening low-income communities and communities of color with some of the most polluted air in the nation. We want healthy, clean air solutions, and we are looking to you, our state energy representatives, to curb pollution by reducing gas use in our homes and communities.

Sincerely,

Jost Diederichs

Dear Commissioners,

What are heat pumps? If you want them to be used as a replacement people need to know by more about them and their cost in relationship to current alternatives .

The CEC must adopt a 2025 building code that requires air conditioners to be replaced with heat pumps at their end of life. Our communities are experiencing unprecedented health and economic impacts from wildfires, heat waves, and droughts. The same fossil fuels causing climate change are also disproportionately burdening low-income communities and communities of color with some of the most polluted air in the nation. We want healthy, clean air solutions, and we are looking to you, our state energy representatives, to curb pollution by reducing gas use in our homes and communities.

Sincerely,

Claudia Trefzger

Re: Docket No. 24-BSTD-01  
P Street Sacramento, CA 95814  
[docket@energy.ca.gov](mailto:docket@energy.ca.gov)

Dear Commissioners,

When we bought our home in San Luis Obispo County 4 years ago, we planned to replace the 30-yr-old gas furnace with a heat pump. In September 2021, we had the work done, and we are glad we did because our energy costs (gas in particular) went down significantly. The system is quiet and provides reliable heat. And it can provide air conditioning as well using our existing ductwork. So I support accelerating the replacement of gas furnaces with more efficient heat pumps.

The CEC must adopt a 2025 building code that requires air conditioners to be replaced with heat pumps at their end of life. Our communities are experiencing unprecedented health and economic impacts from wildfires, heat waves, and droughts. The same fossil fuels causing climate change are also disproportionately burdening low-income communities and communities of color with some of the most polluted air in the nation. We want healthy, clean air solutions, and we are looking to you, our state energy representatives, to curb pollution by reducing gas use in our homes and communities.

Re: Docket No. 24-BSTD-01  
P Street Sacramento, CA 95814  
[docket@energy.ca.gov](mailto:docket@energy.ca.gov)

Dear Commissioners,

As an electrical engineer and retired electrical contractor I am very concerned with using the code to mandate improvements to meet our climate goals. I have electrified my home by replacing gas appliances with heat pumps and an induction stove. By mandating heat pump replacements for worn out air conditioners we can improve air quality (indoor and outdoor), reduce GHG emissions thereby reducing climate change and save residents fuel costs.

The CEC must adopt a 2025 building code that requires air conditioners to be replaced with heat pumps at their end of life. Our communities are experiencing unprecedented health and economic impacts from wildfires, heat waves, and droughts. The same fossil fuels causing climate change are also disproportionately burdening low-income communities and communities of color with some of the most polluted air in the nation. We want healthy, clean air solutions, and we are looking to you, our state energy representatives, to curb pollution by reducing gas use in our homes and communities.

Dear Commissioners,

The CEC must adopt a 2025 building code that requires air conditioners to be replaced with heat pumps at their end of life. Our communities are experiencing unprecedented health and economic impacts from wildfires, heat waves, and droughts. The same fossil fuels causing climate change are also disproportionately burdening low-income communities and communities of color with some of the most polluted air in the nation. We want healthy, clean air solutions, and we are looking to you, our state energy representatives, to curb pollution by reducing gas use in our homes and communities.

Sincerely,

David Offen-Brown

Dear Commissioners,

The CEC must adopt a 2025 building code that requires air conditioners to be replaced with heat pumps at their end of life. Our communities are experiencing unprecedented health and economic impacts from wildfires, heat waves, and droughts. The same fossil fuels causing climate change are also disproportionately burdening low-income communities and communities of color with some of the most polluted air in the nation. We want healthy, clean air solutions, and we are looking to you, our state energy representatives, to curb pollution by reducing gas use in our homes and communities.

Sincerely,

Steven Holzberg

Dear Commissioners,

The CEC must adopt a 2025 building code that requires air conditioners to be replaced with heat pumps at their end of life. Our communities are experiencing unprecedented health and economic impacts from wildfires, heat waves, and droughts. The same fossil fuels causing climate change are also disproportionately burdening low-income communities and communities of color with some of the most polluted air in the nation. We want healthy, clean air solutions, and we are looking to you, our state energy representatives, to curb pollution by reducing gas use in our homes and communities.

Sincerely,

Alexa McMahan

Dear Commissioners,

The CEC must adopt a 2025 building code that requires air conditioners to be replaced with heat pumps at their end of life. Our communities are experiencing unprecedented health and economic impacts from wildfires, heat waves, and droughts. The same fossil fuels causing climate change are also disproportionately burdening low-income communities and communities of color with some of the most polluted air in the nation. We want healthy, clean air solutions, and we are looking to you, our state energy representatives, to curb pollution by reducing gas use in our homes and communities.

Sincerely,

Sara Van Dusen

California Energy Commission  
Re: Docket No. 24-BSTD-01  
P Street Sacramento, CA 95814  
[docket@energy.ca.gov](mailto:docket@energy.ca.gov)

Dear Commissioners,

The CEC must adopt a 2025 building code that requires air conditioners to be replaced with heat pumps at their end of life. Our communities are experiencing unprecedented health and economic impacts from wildfires, heat waves, and droughts. The same fossil fuels causing climate change are also disproportionately burdening low-income communities and communities of color with some of the most polluted air in the nation. We want healthy, clean air solutions, and we are looking to you, our state energy representatives, to curb pollution by reducing gas use in our homes and communities.

Sincerely,

Benjamin Keller

Dear Commissioners,

The CEC must adopt a 2025 building code that requires air conditioners to be replaced with heat pumps at their end of life. Our communities are experiencing unprecedented health and economic impacts from wildfires, heat waves, and droughts. The same fossil fuels causing climate change are also disproportionately burdening low-income communities and communities of color with some of the most polluted air in the nation. We want healthy, clean air solutions, and we are looking to you, our state energy representatives, to curb pollution by reducing gas use in our homes and communities.

Dear Commissioners,

The CEC must adopt a 2025 building code that requires air conditioners to be replaced with heat pumps at their end of life. Our communities are experiencing unprecedented health and economic impacts from wildfires, heat waves, and droughts. The same fossil fuels causing climate change are also disproportionately burdening low-income communities and communities of color with some of the most polluted air in the nation. We want healthy, clean air solutions, and we are looking to you, our state energy representatives, to curb pollution by reducing gas use in our homes and communities.

Sincerely,

Dear Commissioners,

The CEC must adopt a 2025 building code that requires air conditioners to be replaced with heat pumps at their end of life. Our communities are experiencing unprecedented health and economic impacts from wildfires, heat waves, and droughts. The same fossil fuels causing climate change are also disproportionately burdening low-income communities and communities of color with some of the most polluted air in the nation. We want healthy, clean air solutions, and we are looking to you, our state energy representatives, to curb pollution by reducing gas use in our homes and communities.

Sincerely,

Sara Tincher

Dear Commissioners,

The CEC must adopt a 2025 building code that requires air conditioners to be replaced with heat pumps at their end of life. Our communities are experiencing unprecedented health and economic impacts from wildfires, heat waves, and droughts. The same fossil fuels causing climate change are also disproportionately burdening low-income communities and communities of color with some of the most polluted air in the nation. We want healthy, clean air solutions, and we are looking to you, our state energy representatives, to curb pollution by reducing gas use in our homes and communities.

Sincerely,

G William Buchholz
