

DOCKETED	
Docket Number:	22-EVI-06
Project Title:	Vehicle-Grid Integration
TN #:	256592
Document Title:	Network Roaming Workshop - EVCS Presentation
Description:	N/A
Filer:	Jeffrey Lu
Organization:	California Energy Commission
Submitter Role:	Commission Staff
Submission Date:	5/30/2024 8:50:30 AM
Docketed Date:	5/30/2024

EV Fast Charging Simplified.

EV Charging Network Roaming Overview Workshop
California Energy Commission

May 31, 2024

“ *We’re committed to leading the electric transportation revolution by rapidly expanding access to fast, affordable, reliable, and carbon-neutral public EV charging* ”

- Founded in 2018
- One of the largest and fastest-growing public EV charging networks on the US West Coast
- Powered by 100% renewable energy

Network Overview

EVCS develops, owns, and operates a network of fast, publicly accessible, and conveniently located chargers across CA, OR, & WA.

Chargers

- 370+ DC Fast chargers
- 875+ Level 2 chargers

Sites

- 200+ locations
- Hotels, gyms, health facilities, malls, restaurants, public parkings

Locations

- Urban centers
- Highways
- Low-income & disadvantaged communities

Partnerships

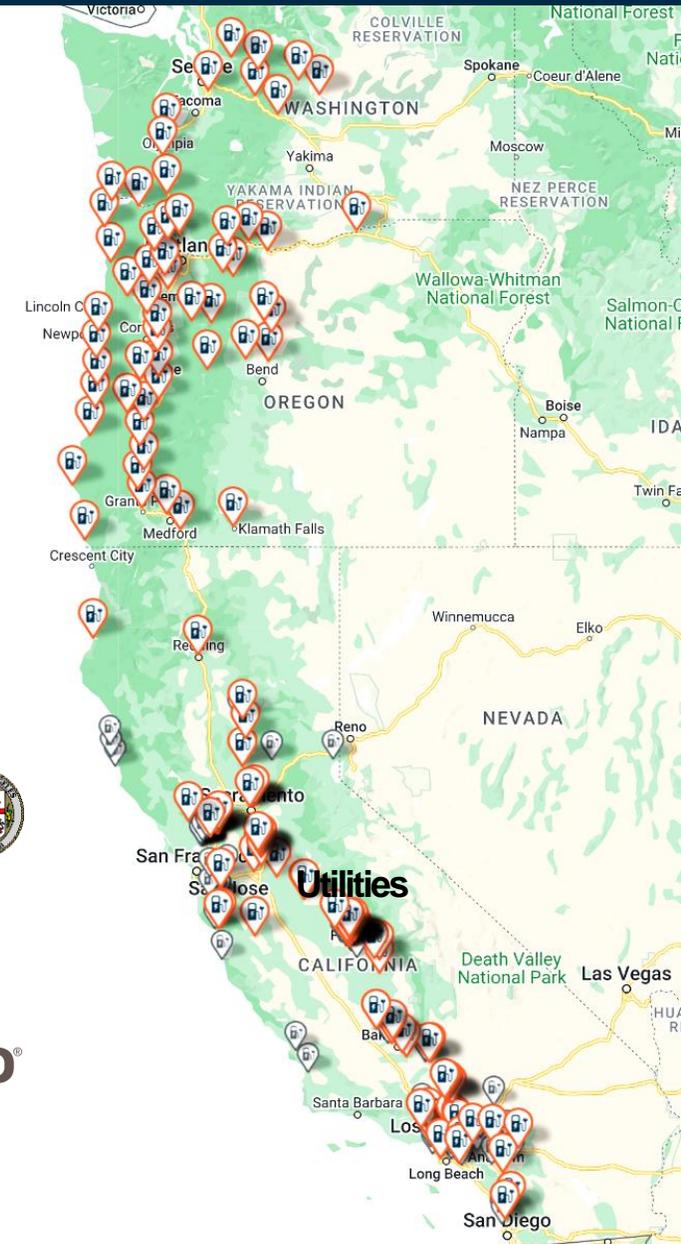

Site hosts

Cities, districts, & public agencies

Utilities

EVCS offers a wide range of charging services, including subscription plans and unlimited charging for rideshare EV drivers.

Seamless charging experience

- Portfolio of charging products: pay-as-you-go; subscription plans
- Several contactless payment methods: Scan-and-charge app; secure website; card readers; RFID
- 24/7 US-based customer support
- Continuous network monitoring, and live updates of chargers' status

Affordable charging rates

- Subscription plans, including unlimited plans ideal for high-mileage drivers
- Strategic partnerships, offering discounted pricing for rideshare drivers: Hertz, Lyft

Convenient charging options

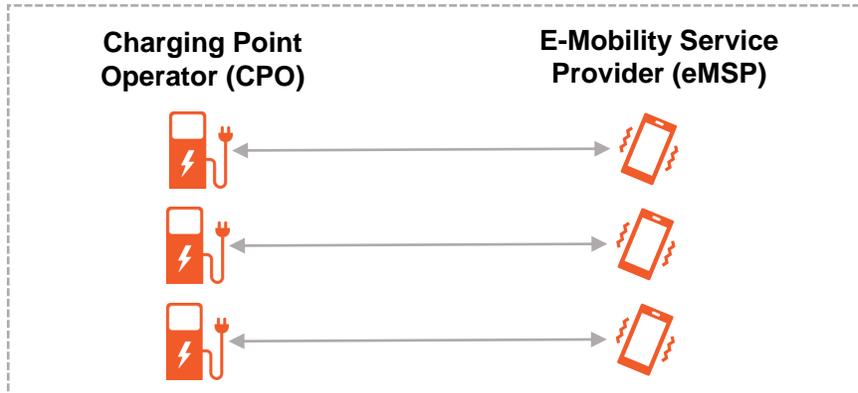

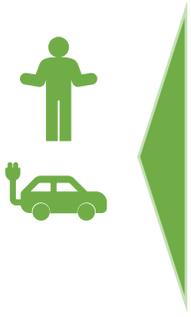

- Variety of charging speeds & locations
- All plugs to charge all EVs: CCS, Tesla, CHAdeMO, J1772
- Live charger availability on multiple apps: e.g. PlugShare, Chargeway
- **Roaming**, both directly and through hubs: e.g. HUBJECT, ChargeHub, Presto

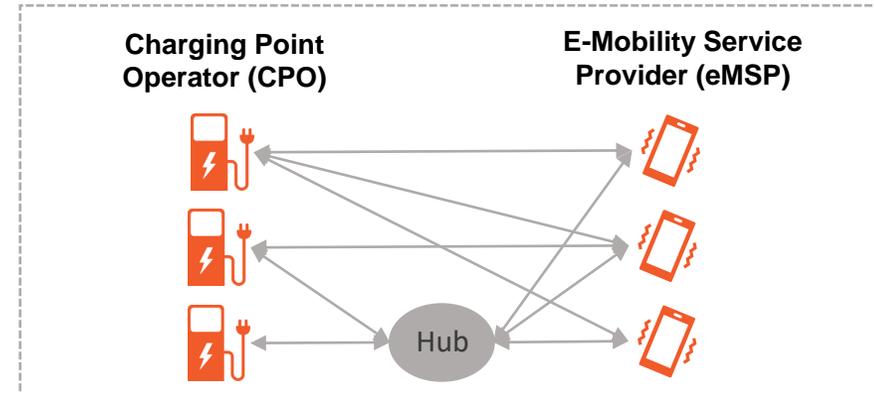

Roaming: What & How

Roaming aims to enhance access and increase optionality for EV drivers, by connecting networks of chargers (CPOs) with apps used for EV charging (eMSPs).

What

Without roaming: EV driver accesses one CPO via one eMSP

With roaming: EV driver can access one CPO via multiple eMSPs, and can access multiple CPOs via one eMSP

How

“Full” vs. “Light”

- **Full roaming:** The eMSP allows the EV driver to (1) locate and see the live status of the charger, (2) start/stop a charging session, and (3) pay for charging
- **Light roaming:** The eMSP allows the EV driver to (1) locate and see the live status of the charger (only)
- **Full roaming** requires OCPI integration. **Light roaming** can be done through OCPI or a simpler API integration

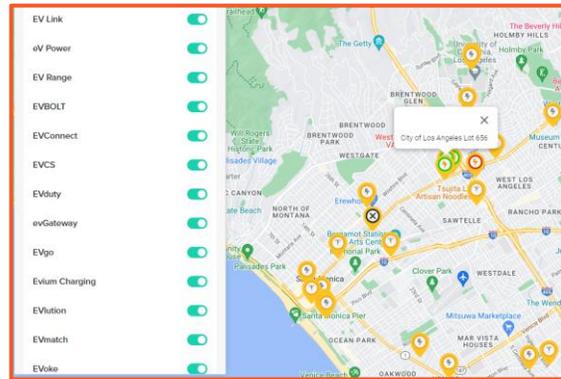

“Direct” vs. “Hub”

- **Direct integration:** A CPO and an eMSP create 1-1 roaming connection
- **Hub integration:** Several CPOs and/or several eMSPs connect to a roaming Hub that acts as an intermediary. A CPO can roam with several eMSPs through the Hub, and an eMSP can roam with several CPOs through the Hub.
- Both **Direct** and **Hub** roaming integrations are governed by well established technical and commercial agreements among the CPOs, eMSPs, and Hubs.

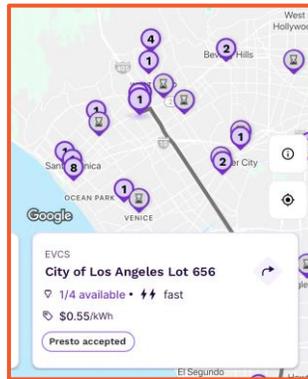

Roaming: EVCS Initiatives & Perspective

EVCS is a leader in roaming, having already engaged in “Full”, “Light”, “Direct” and “Hub” roaming initiatives.

“Full” Roaming

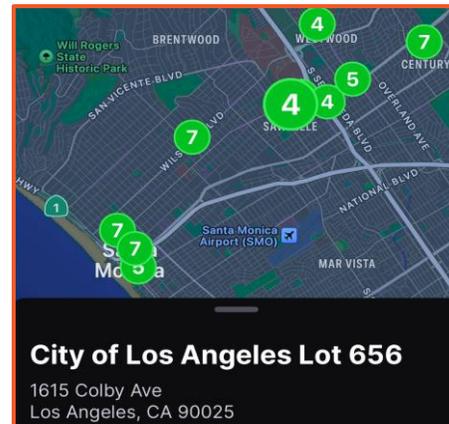

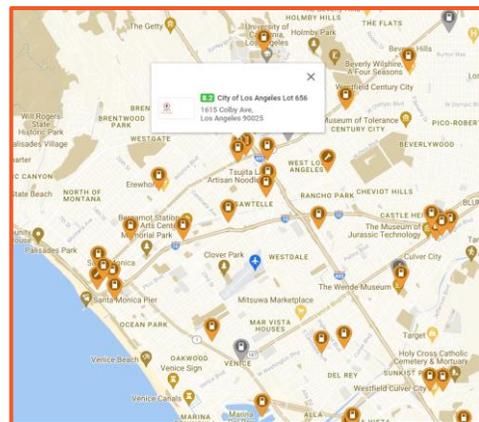

“Hub” roaming

“Direct” roaming

“Light” Roaming

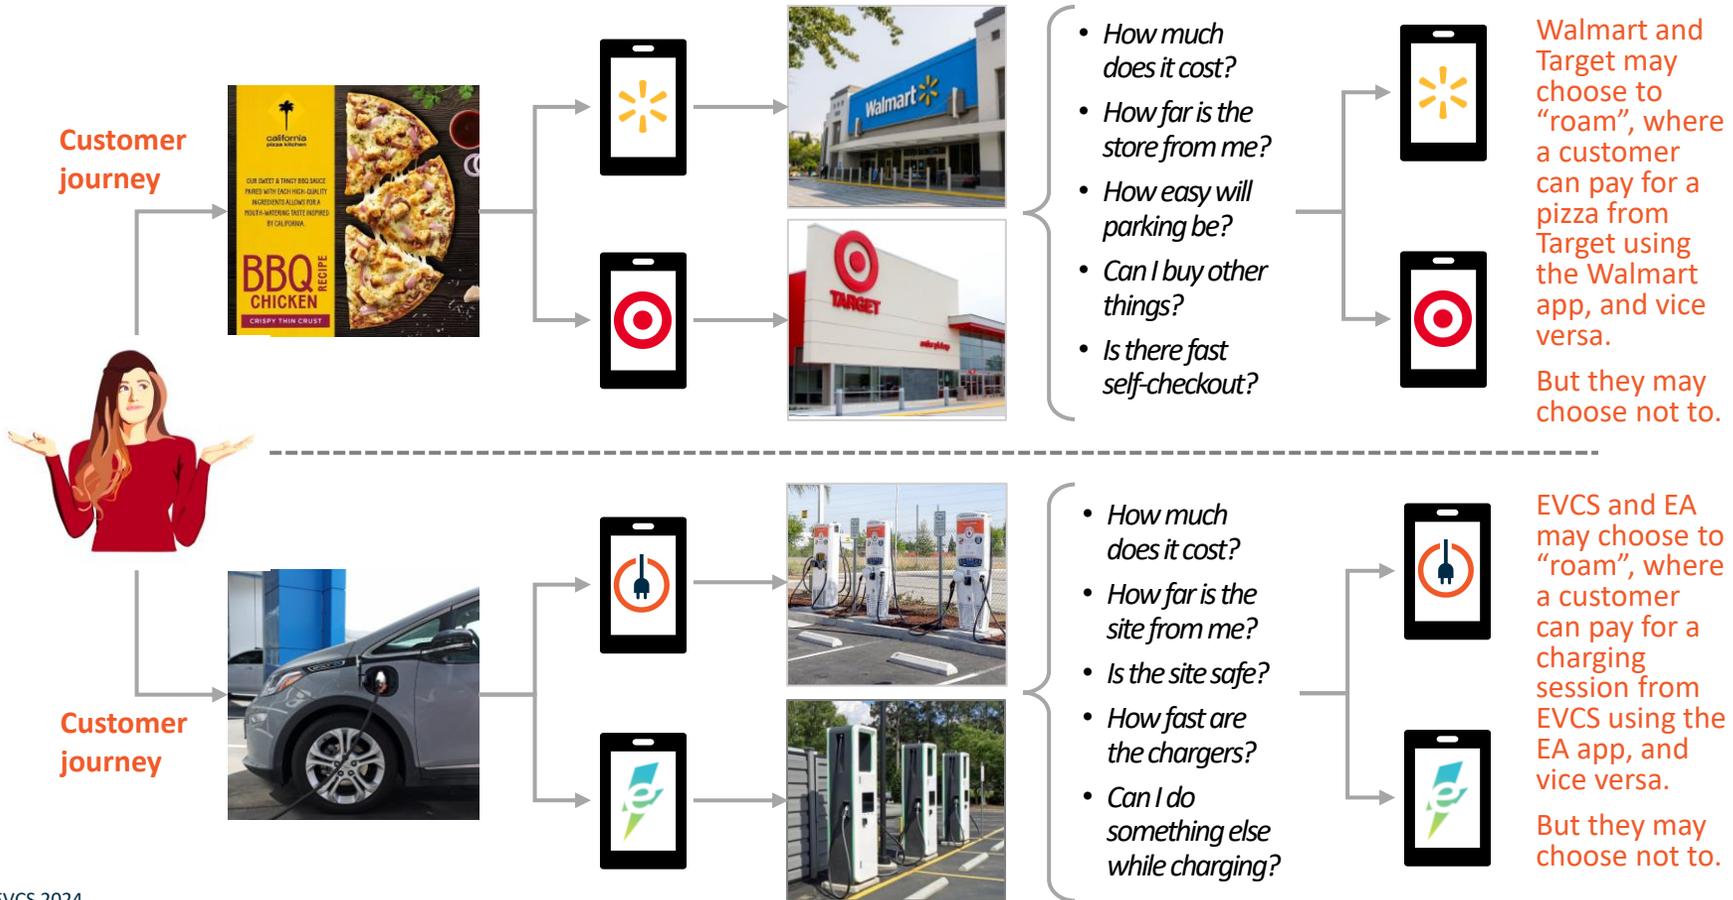

Main Takeaways: Our Perspective

- Roaming technical solutions already exist today, and roaming business initiatives are well underway in CA & US broadly.
- Safe data-sharing is critical to ensure successful roaming integrations. Roaming agreements should always contain provisions on data-privacy & data-sharing.
- Roaming is neither easy nor free. Cost is a material factor in the decision to engage in roaming.

For each roaming initiative, EVCS and the roaming partner sign a roaming agreement that contains provisions for data-sharing and data-privacy.

Roaming: EVCS Initiatives & Perspective

EVCS' approach is anchored in the principle that EV charging is a "retail" experience. Roaming initiatives are market-driven, based on business model & customer needs.

Main Takeaways: Our Perspective

- Different CPOs and eMSPs have different business models, which translate into different roaming needs and interests.
- Given the "retail" nature of EV charging, the most effective way to grow the roaming ecosystem is to let the free-market drive its implementation.

EV Fast Charging Simplified.

Thank you. Questions?
