Will this facility have enough fire insurance for the community

Densely-populated residential areas surround the proposed location of the 1000 galvanized steel containers of Lithium Iron Phosphate, packaging, and wiring. This ravine has caught fire several times in recent memory due to many causes. Our valiant OCFA has put those out with water. Once lithium catches fire, it cannot be extinguished with water. Does this facility have sufficient fire insurance to protect the community if a fire starts at the site and races through the brush up to the homes at the Colinas Bluff Trail? Fire quickly races through this ravine.
