## **Hydrogen Stations and availability**

I have owned 2 Hydrogen vehicles in the past 4 years (1st and now a 2nd generation Mirai, in fact, I fully committed and purchased the Limited Edition Mirai, and now it seems like immediately after I fully committed to the Hydrogen world, it's letting me down, big time! The price per liter when I purchased my first Mirai was at about \$13, then in a matter of months skyrocketed to \$36 per liter! Most of the hydrogen stations in my area (West LA) have either shut down, or are rarely operational. There is a station directly across the street from my place of work in Seal Beach, but it's been out of commission for months. I am really starting to regret purchasing this car and feel like all of us who have committed to it have been abandoned. Don't get me wrong, I LOVE the car. Toyota did a great job building a great, technologically advanced car. I really want to stay committed to the hydrogen experience, but I just need to know that we're not being abandoned, that it will get better soon, with more stations available and open, and with prices lowering to reasonable rates. Please find a way to make this work for us who have committed to this a believe it is the best alternative to Gas or plug in electric out there!
