## **Lithium Battery storage San Juan Capistrano CA**

I am opposed to such storage as the surrounding community is a quiet residential community with high density population. I am concerned that the batteries will be stored in steel containers that will corrode in our damp, salt air environment so close to the ocean, and then catch fire in our high-risk fire area. Because lithium is flammable, explosive and highly dangerous if released in the air, this is in my opinion the wrong location for such facility. It should be located out in the desert of California away from a densely populated community. Look what happened to San Onofre nuclear power plant! It will be near schools too!

Additionally, the City of San Juan Capistrano is correctly adamantly opposing this project within their city limits. Please put it elsewhere. Respectfully, Julia B. Vietor
