## **Continue funding and supporting EV chargers**

I am an EV owner who must travel from Berkeley to Reno, Nevada frequently to visit an elderly friend. My Chevy Bolt requires a charge going up highway 80. As EVs are becoming more popular, I have found that in the last year I have had difficulty finding an available charger in California—yes, there are a few along the route but now there are long waits. Within the last few weeks I was at a single charger in Dutch Flat that wasn't working when another couple pulled up. They were coming from the Bay Area to Reno and they only had 35 miles of charge left. As the charger wasn't working and they were unable to make it to another charger heading East, they had to return to Auburn to look for a charger. I found a charger in Truckee but had to wait for an open spot. We need more chargers! Otherwise EV owners will have to think seriously before taking a longer trip via EV.
