Please support continued development of California's EV infrastructure

To Whom It May Concern:

I write today to support that the CEC continue support for development of more EV charging. Routes along major highways in California have a decent number of charging stations that enable longer range trips. I have often driven from the Sacramento region to southern California (LA, San Diego, Needles, without any problems. For day to day driving I charge my car at home. But EV infrastructure is also crucial to increase adoption by those who live in multi-family housing, those who rent, and for those who live in rural parts of California. As an EV driver, I enjoy the benefits of driving electric. My wife and I save 1500 - 2000 dollars per year by powering our cars with electricity rather than gas. More importantly, because of California's decent electric grid, we have reduced our carbon footprint from transportation to 1/3 of what it was when we drove gas powered cars. EVs = better air quality for our kids and communities and improved public health. Please help fund EV charging for Californians.

Thank you, Stephen Noctor
