## **Please Continue to Support EV Charging**

As a founding member of Plug In America and an early adopter of fully electric vehicles (since 2002!) my wife and I have experienced the joy, efficiency, economy and positive environmental impacts of driving fully electric. We have also seen that making the step from fossil fuel driving to EV only works when the public is convinced there will be a "fueling" infrastructure to support that jump. Incentives and support from the CEC and other government programs has been instrumental in creating the confidence for drivers to make the transition. Please move forward, not backwards, and continue to support every aspect of the electric vehicle charging infrastructure, specifically in multi-family dwellings. Thank you!
