continue to fund EV charging!

I am urging the CEC to strongly support EV charging, particularly for those residents who live in apartments or multi-family housing units and in rural areas. Even living in a larger city, the amount of available and reliable public EV charging is not enough for the large number of EV drivers and as vehicle battery packs get bigger to support longer ranges, the need for more public and reliable fast charging options is even more urgent. As an EV driver, I enjoy the benefits of driving electric. I save money on fuel and maintenance while contributing to better air quality for the community to help support improved public health and a better environment for future generations. The lack of available options for EV charging, particularly in rural areas, makes it challenging to use my EV in certain areas or for road trips which minimizes the environmental benefits of having an EV as it forces us to have to use an ICE vehicle in those instances. Please help fund EV charging for Californians.
