EV Charging Importance

Its vitally important that government continue to support EV chargers not just at home but also in multi family housing, shopping centers, highway rest stops, etc. If CA and America is going to continue to fight climate change we have to make investments. Iâ€™m a retired veteran on disability who made the investment by buying a used EV and installing a home charging station and solar panels. I would like to see my tax dollars used for more investment in EV infrastructure so more people would consider buying an EV. What holds them back now is the lack of charging stations. More incentives should be given to install and maintain them.
