Investing in Hydrogen Stations

As an early adopter of a hydrogen fuel cell vehicle (Hyundai Nexo) I am deeply concerned about the lack of infrastructure as well as the rising cost of fuel. I understand there was a commitment to have over 200 available stations by 2030 however there have been no stations even proposed for construction anywhere close to my area. The few stations I do frequent are often overcrowded and typically unreliable. From where I live I have to drive nearly 10 miles to reach the closest station, and the second closest is roughly the same distance but in an opposing direction. Additionally throughout the course of an average month these stations are only fully operational for a total of 12 to 15 days. I implore you to fulfill your contract and provide this state with far better access to hydrogen fuel. Thank you.
