Continue to fund EV charging

Once upon a time, the vision of an "electric highway" from Canada to Mexico was promised. Washington and Oregon got THEIR act together, why not California? Left to the private sector, we have broken charging stations, charging stations charging outrageous amounts of money and gasoline-powered cars STILL empowered to prevent access to charging stations. While Tesla take care of THEIR own, there may be only one, slow charger available for everyone else.

"I am urging the CEC to strongly support EV charging, especially for multi-family housing residents, renters, and rural drivers." As an EV driver, I enjoyed the benefits of driving electric, now I need a new pack, but as cities "calm" traffic down, but not tempers, constricted intersections and longer waits at lights only produce more emissions. Several studies have shown emissions harm health and contribute to childhood asthma among many other benefits.

Continuing to develop EV charging is key to adoption of the technology. "Please help fund EV charging for Californians." If not Californians, for the planet. Choose love.
