## **Need more infrastructure and fueling stations for H2**

Electric cars are great but a lot of people that live in apartments or have houses such that it's impossible to create charging for their vehicles when they are home. So H2 is a better alternative not only that it can be created green as well. We need multiple avenues of alternative fuels not just electrical stations. H2 is already begun and send its infancy and it shouldn't be abandoned. Please allocate enough money to provide triple them out of stations we have for which we can grow this medium and also provide H2 that's going to be reasonably priced. It's not reasonably priced now and until we have enough diversity of processes to create H2 particularly green then it will never happen If the beginning of now will create a new alternative field besides electric for our next generation.
