## **The Best Way Going Green Without Costing So Much**

Last year were darkest time for solar installing after the table turned toward in favor of electric companies. They rather have us get battery install but the local mark up more 350% than cost of battery installed especially Sacramento County is the most expensive in USA. This Means: 100% battery market killer, as in favor of gas-powered Generac as back up generator. If I wanted back up home battery, I rather go with LiFePO4 -or- sodium-ion as much safer battery than lithium-ion battery from very dangerous run away fire.
