Urgent need for a hydrogen fuel station in Palm Springs

As an owner of a Fuel Cell Vehicle I am used to face some limitations on the availability of hydrogen. In Los Angeles we almost every so often have to drive a little distance when stations are out of fuel or have mechanical issues. But what we - and many others - cannot do is going to a touristic destination like Palm Springs because there is absolutely no fill up for hydrogen cars. From LA the last existing station on the way to Palm Springs is near Riverside - almost 60miles away! So when you are driving around in Palm Springs and get low on fuel you have to drive 120miles to and from Riverside (if the station is working) to enjoy the rest of your stay in Palm Springs. So it's really not likely that you dare to do that.

I think a lot of drivers would like to take their emission free cars to such an extraordinary touristic destination.
Please work on that!
