Against The Energy Storage Project in San Juan Capistrano

We are opposed to the Energy Storage facility just over the hill from our house. From an engineering and fire safety standpoint, I know it is very difficult to extinguish a fire that is generated from a facility of this type. There are numerous neighborhoods to the west of this proposed facility and if a fire was to begin in this area it could spread very quickly to the west. If it were to move to the east, there are some residences there along with the major freeway from Los Angeles to San Diego. Traffic could be severely impacted or brought to a standstill.

Historically, fires from facilities like this burn for days until they burn themselves out and they create terrible air quality as a result of the fires. This is the last thing we need in Southern California.

Ask yourself this question- Would I want a facility of this type so close to the place I reside and call home? Would I want to expose my family, children, grand children or parents to a facility of this type?

Thank you for your consideration!

Sincerely,
Don
