Adverse Event Evacuation Plan

What is the proposed evacuation plan for the surrounding areas, communities and for first responders. Specifically, how will first responders ingress while residents egress the area? What are the known acute and chronic illnesses associated with burning lithium ion batteries? Are the local hospitals equipped and sufficiently to handle ALL of the local communities that would be affected if a runaway fire were to occur? To the west and southwest of this site are elementary schools and a middle school. How will these schools' emergency procedures be impacted/affected? Further, outside of the brief discussion in the proposal, there is little discussion on autonomous shutdown of the facility and no discussion on engineered fire safety systems to sufficient detail to gain an understanding of autonomous fire safety systems. There is no discussion of storage onsite of fire suppression materials or plans thereof to mitigate a fire.
