EXPAND availability of EV chargers

One of the most important issues for Californians today is the cost of transportation. To get people to change to electric vehicles one of the greatest incentives is the availability of EV charging stations at home and wherever they go. This means adding EV chargers at apartment complexes and at work, in cities and rural areas. The more people drive electric to see our state the less pollution they will generate improving everyone's health and contributing to a diminishment of the global warming that is driving fires and drought and storms and floods.
