Support and expand the use of electric vehicles in California!

The movement from internal combustion engine vehicles to electric vehicles is the most immediate thing we can do to reduce pollution in California's towns and cities up and down the state. But this can only succeed if the vehicles are supported with charging stations so drivers don't have to worry about keeping their vehicles charged.

Having attendewd one of your meetings, I was impressed with how you handled the petition to include non-energy issues when considering energy production. I trust you will also support EV charging, especially for rural drivers, multi-family housing and renters. EVs allow us to reduce driv8ing costs as well as air pollution,
