## **Energy Storage**

I am opposed to the energy storage facility location for a variety of reasons. First and foremost the location is close to homes in Laguna Niguel and the impact it can have on the residence. Second, should the facility catch fire (which seems to happen frequently and appears difficult to put out) what about the toxins in the air? Depending on which way the wind blows you have a number of schools in the area and students could be affected. Third, you have an ecosystem that could be compromised in the area - how will you mitigate damage to water tables, etc.?

It just seems to me that this entire plan is ill conceived and only benefits one party
