Opposed to Lithium Battery Farm

I am 100% OPPOSED to putting a highly controversial battery farm near hundreds of residents, in a fire-sensitive area, and next to a fragile natural creek that runs to the ocean less than 4 miles away. It is well documented that Lithium Battery Farms have issues and are subject to fires that are next to impossible to extinguish. In January of this year, our Homeowners'™ Insurance was canceled by Farmer's™ Insurance due to wildfire potential. They will not insure me due to fire potential and now someone thinks it is a good idea to add additional fire risk to the community. Please deploy some common sense and stop this project. This should be done in open spaces far from residential communities. ☐
