## **Please Reject This Dangerous Proposal**

It appears that the site selected for this battery storage equipment is inappropriate because of its proximity to residential properties. This type of project has been known to catch fire, emitting toxic gases and flaming debris. Once started, these fires often cannot be extinguished until the site/container(s) are completely consumed.

Access to this site is limited thus the ability to bring in adequate fire fighting equipment to protect the surrounding residences is also limited.

If (when) a fire occurs at this facility, nearby residences would have to be evacuated, possibly for weeks or months until the toxic byproducts of the fire were removed.

Also, the value of the surrounding properties will drop as the facility is an industrial use near private residences, a clearly incompatible use.
