Contest Proposed Battery Energy Storage System Project (City of San Juan Capistrano)

I am writing to express my objection to the battery energy storage system project being proposed for San Juan Capistrano. Not only is it in close proximity to many single family homes, it is also in close proximity to multiple 55 and older apartment complexes, two schools, and multiple facilities that house horses. Battery energy storage systems have a higher likelihood of starting a fire. With the amount of open brush in that area, a significant wildfire is very likely to begin which would jeopardize many elderly, children, and animals.
