Oppose the Compass Energy Storage Project

As a resident of Laguna Niguel, I greatly oppose the location of the Compass Energy Storage Project. There is NO reason that something like this should be located anywhere near a bustling city, full of people. The ONLY thing that would make sense is to build it out in the desert or somewhere far enough away from a large population of humans. This location is a fire danger zone even without this facility. And, as a former cancer patient and a homeowner in this neighborhood, I don't want to live near something that could very possibly give me cancer again, if not managed properly. And, with the way most Americans take short cuts with their work performance these days, I don't feel safe living by this facility. PLEASE PROPOSE A NEW, REMOTE LOCATION! You can build your own fire dept right next door to a facility in the desert! Thank you.
