## **This is not an appropriate location for this project**

The City of Laguna Niguel has already declined the application to build; it is unconscionable for California State to override the wishes of the Local Government who has the best interests of it's residents in mind.

As a longtime resident of Laguna Niguel - and someone who lives in close proximity to the proposed storage facility - I am very much opposed to the building of a hazardous industrial storage facility in our beautiful city.

With California homeowner insurance prices rising or being cancelled due to natural disasters, why on earth would the State think building a storage site for highly flammable and explosive material next to a very populated and beautiful area was a good idea?

Several schools are in close proximity - was this taken into account? What kind of risk assessment was done on increased risk of fire, explosion, and air quality issues if this facility experiences a storage failure?
