This facility is too close to schools and would endanger the children

Please look at the attached map of some of the schools nearby this location. These schools cannot be evacuated easily or quickly. At least 17 schools are close by. A 13-acre facility of 1100 containers stocked with Lithium batteries ebbing and flowing with 250 megawatts of electricity in an Open Space area with only enough fire suppression to curtail brush fires would create a fire hazard. The Lithium does not need to start the fire. In this area, tourists, recreationists, a few unhoused people can and have started fires. Once Lithium does catch fire, toxic fumes are the result. Please protect our children and deny this permit in this location. It is too close to schools.
