## **Location, location, location!**

I, □ donâ€™t think there could be any worse place for a dangerous facility such as this. There are homes just over the ridge, historic landmarks just down the road and countless schools scattered within a few miles of this place. Not to mention the major interstate right next to it. It is not the place for items that burn hot and fast that are difficult to extinguish. Why not go inland where there are miles and miles of open land that no one lives on? Not the densely populated and heavily trafficked San Juan Capistrano? This is a horrible and dangerous idea proposed by those who will not be affected by it.
